

Jibin Ou

System Architect — Automotive Systems
Location: Gothenburg, Sweden
E-Mail: jibin.ou@outlook.com
Website: http://insyncim64.github.io
Telephone: +46-73-902-4400

SUMMARY

Automotive system architect with experience spanning ADAS maps and geolocation, central compute platforms, and vehicle functions. Connects system requirements, interfaces, signal integration, and platform architecture across Adaptive AUTOSAR, Classic AUTOSAR, and Linux environments.

SKILLS

Automotive Systems: System Architecture, System Engineering, ADAS/AD, Core Compute Platform, Maps & Geolocation
Platforms: AUTOSAR (Adaptive & Classic), SOME/IP, POSIX
Interfaces: CAN/Ethernet signal databases, SOA
AI & Software: AI-assisted engineering workflows, LLM workflow design, Python, C/C++, Java, MATLAB, Linux, Git
Methods: Requirements Engineering, Platform Integration, System Verification, CI/CD
Related Coursework: Machine Learning, Human-Computer Interaction

EXPERIENCE

System Architect Sept. 2025–Present
Volvo Group, Gothenburg, Sweden

- Work on system architecture for Driver Coaching and related vehicle functions in the T3 and VCM environments;
- Align system-level function needs with architecture and integration requirements across platform stakeholders;
- Develop AI-assisted workflows for product-issue investigation, connecting engineering context and software evidence to root-cause hypotheses and test planning;

System Architect 2022–2025
Volvo Cars, Gothenburg, Sweden

- Focused on system architecture and integration for the Core Compute Platform across multidisciplinary engineering domains;
- Integrated service interfaces and vehicle signal databases across POSIX-based platform services;
- Addressed platform performance, end-to-end timing, and data-integrity requirements through system-level architecture;

System Engineer 2018–2022
Volvo Cars, Gothenburg, Sweden

- Focused on vehicle map and geolocation information for ADAS and automated-driving functions;
- Coordinated technical alignment with Google, infotainment, and ADAS function teams;

Software Developer Oct. 2016–2018
Honeywell, Shanghai, China

- Developed client applications and middleware for an enterprise IoT logistics platform; maintained Greater China cloud infrastructure;

Prior Experience (2011–2016)

Software Developer, Honeywell Movilizer, Mannheim, Germany 2015–2016

Research Assistant, ETH Zürich (HCI & Software Reliability Labs), Switzerland 2014

Development Intern, BMW Group (Vehicle Integration & Validation), Germany 2013

Research Assistant, Fraunhofer FIT (User-Centered Computing Group), Germany 2011–2012

EDUCATION

M.Sc., media informatics October 2010–April 2014
RWTH Aachen, Aachen, Germany

Visiting Student, computer science July 2013–April 2014
ETH Zürich, Zürich, Switzerland

B.Sc, information and computational science September 2006–June 2010
Sun Yat-sen University, Guangzhou, China

SELECTED PROJECTS

AI-Assisted Product Issue Investigation Workflow Volvo Group
Engineering workflow for structured investigation of product and fault reports

- Developed staged AI workflows that combine vehicle-system context, software evidence, and engineering analysis to structure issue investigation from symptom understanding through root-cause hypotheses and test planning;
- Built an evaluation loop using classified historical cases and evidence checks to assess traceability, consistency, and explainability and guide iterative workflow updates;

Driver Coaching System Architecture Volvo Group
System architecture for Driver Coaching and related vehicle functions

- Supported system architecture and system-level design for Driver Coaching in the T3 and VCM environments;
- Connected architecture decisions with development, integration, and test needs;

Core Compute Platform Interfaces & Signal Integration Volvo Cars
Platform integration, vehicle signal databases, and service interfaces

- Integrated signal-database allocation and service interfaces as part of the central compute platform architecture;
- Addressed latency, throughput, and data-integrity requirements across platform services;

Vehicle Map & Geolocation Information Volvo Cars
Map and geolocation information for ADAS and automated-driving functions

- Worked on map and geolocation information used by ADAS and automated-driving functions;
- Coordinated map-information needs and technical interfaces with Google, infotainment, and ADAS function teams;

LANGUAGE

English (professional proficiency), Swedish (advanced), German (advanced), Chinese (mother tongue), Cantonese (mother tongue)

HONORS & AWARDS

Won *Bravo Gold Recognition*, Honeywell, Shanghai, November 2016 and July 2017

Won *IDEA League Student Research Scholarship*, IDEA League, Zürich, 2013
